

## How to support your child at home

- Use the mental strategies covered this evening

### KS1

- Learn the 2, 5 and 10 times tables by heart (3 times tables if they already know these)
- Practise number bonds to 10 and 20
- Learn doubles and corresponding halves of numbers up to 20
- Practise number bonds to 10 and 20
- Learn doubles and corresponding halves of numbers up to 20

### KS2

- Learn times tables appropriate to the year group that they are in (they should know all times tables up to 12x12 by the end of Year 4 – test to be introduced summer 2020)
- Practise number bonds to all numbers up to 100 (and 1000 if you can)
- Give your child a number and ask them to make it as many different ways as they can using addition, subtraction, multiplication and division
- Experiment with partitioning numbers in different ways
- Encourage your child to use maths everywhere – reading clocks, train timetables, handling money, prices in the supermarket, weighing cake ingredients – maths is all around us everyday

*Have a positive attitude towards maths yourself and tell your children that they CAN do it!*
